ISMAIL ABBASI

DevOps Engineer | Full-Stack Developer | AWS Cloud | Forward Deployed Engineer

+92 325 5028225 | Email | LinkedIn | Github | Portfolio

PROFESSIONAL SUMMARY

I work in Production . Full-Stack Developer and DevOps Engineer with **4+** years of experience designing, deploying, and scaling production SaaS applications and cloud infrastructure. Proven track record across the MERN/Next.js stack, Node.js/Express backends, and Rust microservices, paired with hands-on AWS cloud architecture (EC2, EKS, RDS, S3, CloudFront, Lambda, IAM, VPC), Kubernetes orchestration, and CI/CD automation (GitHub Actions, ArgoCD, Terraform). Delivered 99.9% uptime production systems, 80% faster deployment cycles, and AI-integrated products using OpenAI, Gemini, and LangChain. Comfortable operating as an individual contributor across both infrastructure and application layers, with international remote-team experience (Australia).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, Bash / Shell Scripting

Frontend: React.js, Next.js, Zustand, React Query, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Prisma ORM, WebSockets, WebRTC, MediaSoup, Graph API

Rust & Libraries: Actix Web, Tokio (async runtime), Serde, SQLx / Diesel, Redis-rs

AWS Cloud Services: EC2, EKS, Lambda, S3, CloudFront, Route 53, RDS, ElastiCache, VPC, IAM, Auto Scaling Groups, Elastic/Application Load Balancers, CloudWatch, Certificate Manager

Containerization & Orchestration: Docker, Docker Compose, Kubernetes, Helm, Ingress Controllers, HPA, Cluster Autoscaler

CI/CD & IaC: GitHub Actions, ArgoCD, Terraform, GitOps, Blue-Green & Zero-Downtime Deployments

Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Pgvector (RAG)

AI / ML: OpenAI API, Gemini, LangChain, Vector Embeddings, RAG Pipelines

Monitoring & Web Servers: Prometheus, Grafana, Loki, Promtail, Nginx, Apache, SSL/TLS, Let's Encrypt

Automation: n8n, Kafka

PROFESSIONAL EXPERIENCE

YC Solutions — Full-Stack & AI Developer *full time - Jan 2024 – Present*

- Architected and shipped production-grade AI SaaS applications end-to-end using React, Node.js, and TypeScript — including admin dashboards and Role-Based Access Control (RBAC) for secure, multi-tenant access.
- Built an AI-powered technical interview bot using OpenAI and n8n, automating question generation and delivering objective, bias-reduced candidate feedback — replacing a manual screening step in the hiring pipeline.
- Owned the full AWS deployment lifecycle, using Docker and Nginx to establish CI/CD pipelines that enabled scalable, high-availability infrastructure with minimal manual intervention.

ENCS — Backend Developer / DevOps Engineer *full time - Mar 2023 – Jan 2024*

- Developed and optimized 20+ REST APIs using Node.js/Express, integrating JWT authentication and tuning PostgreSQL/MongoDB queries for performance.
- Achieved 99.9% application uptime by resolving critical production bugs and refactoring 15+ legacy API endpoints with input validation, rate limiting, and secrets management.
- Built and standardized CI/CD workflows across multiple projects; containerized applications with Docker and Docker Compose to reduce environment inconsistencies.
- Configured networking, DNS, SSL, and Nginx/Apache infrastructure for production and staging; implemented centralized monitoring and logging to improve uptime and incident visibility.

Leecare Solutions (Remote – Australia) — Backend Developer *part time - Apr 2023 – Aug 2023*

- Developed and optimized backend REST APIs as part of a distributed, cross-timezone team, improving database query performance in a production healthcare-adjacent SaaS platform.
- Implemented secure authentication flows and data-integrity safeguards, supporting compliance and reliability standards required for handling sensitive healthcare-adjacent data.
- Built real-time communication features using WebRTC, enabling low-latency audio/video connectivity within the platform's care-coordination workflows.
- Build End to End Meeting App for Inhouse person with Media Soup for WebRTC connection management .

KEY PROJECTS

Hostrif - Custom Antidetect Browser Platform & Automation Engine

Rust · C++ (Chromium) · Node.js · Python · Electron · Puppeteer · Playwright (Closed-source commercial tool — not publicly available)

- Architected a full-stack antidetect browser platform across three coordinated engines: a Rust binary launcher (shardx-engine), a Python/Playwright engine, and a Node.js/Puppeteer engine , all managed from a single Electron desktop app with SSE-based real-time logging.
- Wrote custom C++ patches for Chromium 149 Blink and net/ layers: implemented RFC 1929 SOCKS5 username/password auth (traced ProxyServer → SOCKSSocketParams → SOCKS5ClientSocket) and an Android fingerprint component (plugins, font allowlist, UA-CH client hints) gated by a JSON profile file passed via --fingerprint-profile flag.
- Engineered a dynamic proxy infrastructure: multi-source proxy scraper validating 600 candidates at 120-concurrency, latency/authenticity scoring (>=89% threshold), tunneled geo-IP resolution, heuristic OS fingerprint detection, and a local SOCKS5 auth relay TCP server for stock Chromium builds lacking native credential support.
- Implemented full fingerprint spoofing via CDP: Canvas pixel noise, WebGL vendor/renderer, AudioContext, Navigator, WebRTC ICE nullification, Screen DPR — all per-profile seeded.
- Designed multi-tenant RBAC system on Supabase with JWT auth, invite-link signup, admin impersonation, audit logging, and dual storage mode (cloud DB or per-user JSON on disk).
- Built UTC hourly traffic distribution engine with configurable weekly curves and multi-source traffic planning (UTM/referer chains) to produce organic-looking analytics.
- Packaged as cross-platform Electron desktop app (Windows/macOS/Linux) with system tray, auto-updater, always-on-top transparent HUD overlay, and offline Ed25519 license gate.
- Source code is private. Code walkthrough and architecture discussion available upon request.

Trackese - Pay-Per-Call Routing & Tracking Platform

Node.js/Fastify Core Service, Rust/Actix Web Call Service, Redis, Kafka, PostgreSQL

- Designed a dual-microservice platform — a Node.js/Fastify core service paired with a high-performance Rust/Actix Web call-processing service — built for concurrent, low-latency call handling using Tokio's async runtime.
- Engineered real-time call routing using a Redis-first decision layer to route calls in milliseconds, with Kafka-based event streaming to keep routing configuration synchronized across services without downtime.

MoviesHunter - Data Streaming Platform — Cloud Infrastructure & Delivery

Node.js, PostgreSQL, Redis, Multi-region CDN/Edge, React Native, Next.js, Docker, K8s, linux, S3

- Architected cloud infrastructure for a video streaming platform serving 10,000–50,000 active users; configured S3 storage and CloudFront CDN, improving stream load times by 60%.
- Managed a catalog of 50,000+ movies and web series, with metadata, search indexing, and access-control logic scaled to support fast discovery and playback at that volume
- Designed data architecture across a 2TB+ datastore spanning session/presence, access control, and release metadata
- Deployed containerized Node.js services on EKS with HPA autoscaling; integrated ElastiCache (Redis) to reduce database load by 40%.

Axiomra EMS - Employee Activity & Screen Monitoring System

Rust (Axum), React 19, Electron, PostgreSQL, WebSockets, Docker · Full-stack · Real-time · Desktop & Web

- Built an employee monitoring platform that tracks workforce attendance in real time — admins define shift schedules and grace periods, employees can only check in within their assigned window
- Captures and stores a screen recording of every work session, which the admin can browse, filter by employee or date, and play back at any time
- Delivers a live admin dashboard showing every employee's current status — checked in, late, or offline — and lets the admin view a live screenshot of any active employee's screen
- Auto-detects when an employee closes the app, loses internet, or shuts down their PC and immediately marks the session as interrupted, keeping attendance records accurate without any manual action.
- Containerized all services (Rust API · React admin panel · PostgreSQL) with Docker Compose behind nginx; packaged the employee client as a Windows desktop app via Electron Builder with NSIS installer.

Q-up.ai - Inbound and Outbound Call Automation SaaS

Node.js, Express.js, TypeScript, Prisma ORM, PostgreSQL, n8n, OpenAI

- Built an AI-powered call automation platform that handles both inbound and outbound telecalling — automating call handling, lead qualification, and follow-up workflows end-to-end, cutting manual lead qualification time by 75%.
- Engineered a type-safe, production-grade backend with Prisma ORM and PostgreSQL, enabling zero-downtime schema migrations and consistent data integrity across every release.

AWS - Production Infrastructure on AWS

AWS EC2, RDS, S3, CloudFront, Lambda, Terraform, GitHub Actions, Docker, Nginx

- Built Terraform-managed infrastructure (VPC, EC2 ASGs, RDS, CloudFront) achieving 99.9% uptime and zero-downtime, blue-green deployments via GitHub Actions.
- Implemented serverless file processing with AWS Lambda triggered by S3 events for automated document uploads, resizing, and format conversion.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate — Amazon Web Services - 2024
- Relational Database Certification — freeCodeCamp - 2023
- The Complete JavaScript Course by Jonas Schmedtmann— Udemy - 2023

EDUCATION

- Bachelor of Science in Computer Science (BSCS) — GCUF | 2019 – 2023
- Intermediate (ICS) — Best Group of Colleges | 2017 – 2019
- Matriculation (Computer Sciences) — The Educators | 2017
